

CHANNEL A

Ch/#	NAME	BASED ON A:		OPTIONS	NOTES
A1	'64 Black	1964 Fender Pro Reverb		• INPUT lo/hi • BRIGHT off/on • MOD off/on	Timeless blackface tones from super clean to mild, bluesy drive. Mod adds a little grit and
A2	'67 Bass	1967 Fender Bassman		• INPUT lo/hi • BRIGHT 1/off/2 • MOD off/on	The dirtier cousin of the Pro Reverb, great for blues and rock. Mod mode takes it up a steo -
A3	Zen-Master	90's Fender Tone-Master		• CHANNEL A/B • FAT off/on	As used by Page, Grohl and Sambora. Full, bold cleans on channel A. American crunch
A4	Betsy	Friedman Buxom Betty		• INPUT lo/hi • BRIGHT 1/off/2	Friedman's take on the brown/blackface tones of the 60s. Fat, clean and loves
A5	Loner	Mesa Lonestar		• CHANNEL 1/2 • DRIVE (3-pos)	Warm, pedal-friendly Fender tones as used by the wonderful Andy Timmons.
A6	ExTSee (green)	Bogner Ecstasy 101B		• Pre-EQ B1/N/B2 • BOOST off/on	The versatile, Fender-inspired green channel. Blue and Red channels are available on channel B.
A7	.50"	Boogie .50 Caliber +		• BRIGHT off/on	Lead channel only. As used by Pepper Keenan of Down and Corrosion Of Conformity
A8	+	1985 Boogie MkIIC+		• BRIGHT off/on • TREBLE SHIFT off/on • DEEP off/on	The legend that keeps keeping on, from Lukather to Petrucci. Lead channel only.
A9	++	1985 Boogie MkIIC++		• HET blue/off/red • TREBLE SHIFT off/on • DEEP off/on	When the C+ doesn't have enough gain! The HET switch kicks in a choice of two preset EQ curves that further scoops the mids and tightens
A10	III	Boogie MkIII		• BRIGHT off/on • TREBLE SHIFT off/on • DEEP off/on	Early MkIII tones - similar to the C+ but has a different upper-mid character. Lead channel only.
A11	III Red	Boogie MkIII red stripe		• BRIGHT off/on • TREBLE SHIFT off/on • DEEP off/on	Hotter, tighter Mark tones than the earlier MkIII. Lead channel only.
A12	IV	Boogie MkIV		• CHANNEL R1/R2/Lead • FAT off/on • BRIGHT off/on	The last great Mark? R1 (clean), R2 and Lead channels are all represented - and all three can have unique GEQ settings.

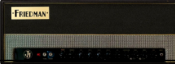

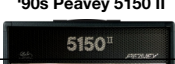

CHANNEL B

Ch/#	NAME	BASED ON A:		OPTIONS	NOTES

A12	IV	Boogie MkIV		• CHANNEL R1/R2/Lead • FAT off/on • BRIGHT off/on	The last great Mark? R1(clean), R2 and Lead channels are all represented - and all three can have unique GEQ settings.

Amp Vault B

Ch / #	Amp Name	Based on	Options	Notes
B1	HW50	Hiwatt Custom 50 	• INPUT lo/hi • CH. BLEND (3-pos)	Loud, clean and loves pedals - a nice contrast to some of the more aggressive British amps in the vault.
B2	M45	1965 Marshall JTM45 	• INPUT lo/hi • BRIGHT off/on • MOD off/on	The amp that started a revolution. High treble channel only, and it's still meaty. Mod mode is tighter with more drive, and perfect for hotter Angus tones.
B3	'69 Plexi	1969 Marshall Super Lead 	• INPUT lo/hi • BRIGHT 1/off/2 • CH. BLEND (3-pos)	THE sound of rock n' roll. Bright 2 (4700pF) is the classic, aggressive Plexi sound, and 2 (100pF) is perfect for cleaner tones.
B4	'71 Bass	1971 Marshall Bass 	• INPUT lo/hi • BRIGHT 1/off/2	Players claimed early on that many so-called Bass amps were exceptional guitar amps. It's true. A nice Gretsch and a solid right hand will get you into Malcolm territory no problem. Allman and other classic tones can also be had - you provide the quality playing.
B5	'79 Master	1979 JMP 2203 	• INPUT lo/hi • BRIGHT 1/off/2 • MOD off/on	Classic master volume tones with some extra features, e.g. Lo input with Bright 1 makes for excellent cleans. MOD mode increases gain a little and revoices the preamp for a tighter feel.
B6	'82 Master	1982 JCM800 2203 	• INPUT lo/hi • BRIGHT 1/off/2 • SL-X off/on	On paper this JCM should sound much the same as the above JMP version - but the amp this was cloned from was noticeably more aggressive and snarly. MOD mode turns it into a JCM900 SL-X for a dirtier, but smoother 90s tone.
B7	José	José-modded JMP 	• BRIGHT 1/off/2 • DRIVE (5-pos) • CLIPPING off/on	Our genuine José Arredondo JMP reverse engineered, and sonically cloned to perfection. The OG has no diode clipping, but we've included it here for kicks. Rlg1 is a good starter, Rlg2 for Kill 'Em All tones, Rlg3 for Dr Feelgood crunch.
B8	Green Amp	Dookie-modded Plexi 	• Dookie / P90	Dookie modded based on a Plexi clone we acquired that was modded by Martin Golub. P90 mode is our take on 2000's BJA tones, and has more Voxy midrange.
B9	Camron	Cameron-modded JMP 	• BRIGHT 1/off/2 • CLIPPING off/on	Cameron-modded JMPs are not easy to find, just like modder himself. Dodgy business practices aside, the purple monster delivers the goods and so it had to be included. Clipping optional, but once it's on it's hard to turn off.
B10	Appetite	Marshall AFD-100 	• AFD / #34 mode • MOD off/on	Both modes of this nasty, gainy signature amp are onboard. With MOD off, both AFD and #34 mode sonically replicate the OG amp. MOD on alters the voicing of each to achieve tones closer to the albums.
B11	÷	Divided by 13 LDW39 	• INPUT lo/hi • BRIGHT off/on	Fatter, smoother Marshall master volume tones from the boutique world. Great for thicker HB tones or for fattening up single coils.
B12	SL100	Soldano SLO-100 	• Clean/Crunch/OD • BRIGHT off/on	All three modes of this American classic sonically cloned, with bright option.

Amp Vault B cont.

Ch / #	Amp Name	Based on	Options	Notes
B13	Shelly	Friedman Dirty Shirley 	• INPUT lo/hi • BRIGHT off/on • STRUCTURE L/M/H	JTM45 meets a JCM800. Switchable bright cap, the deep control and the option of EL34s or 6L6s make ours a little more versatile than the OG.
B14	BeFreed	Friedman BE-100 	• BE/HBE mode • SAT off/on • MOD off/Fat/C45	One of the best 'modern' Marshalls in recent years, especially for players who like their Brit gain a little more refined, and achievable at low volumes. Plenty of voicing and gain options available and some clever Zen tech means no drop in level when engaging diode clipping (SAT).
B15	JC	Friedman JJ-100 	• JBE off/on • TIGHT off/on	Modern Cantrell tones and beyond. JBE (clipping) mode is optional, but it seems to work best if left on - there's plenty of other medium crunch options onboard. The tight switch works well for lower tunings with high gain settings by rolling off some lows early in the preamp.
B16	Helium	Bogner Helios 	• Pre-EQ B1/N/B2 • INPUT Plex/Hot • MODE 70/80	Channel 2 of this rawer sounding Bogner accurately cloned. All four modes are included - Plex and Hot Input, with traditional (70s) or clipping (80s) gain styles.
B17	ExTSee	Bogner Ecstasy 101B 	• Pre-EQ B1/N/B2 • CH. Blue/Red • BOOST off/on	Blue and Red channels from Bogner's flagship model. The Green channel is available in Amp Vault A being very much a Fender-derived clean. Note on our version you don't need to crank the Treble and Presence to get the brightness you need.
B18	Rev Blüe	Bogner Überschall 	• Blue/MkII/Ultra • TIGHTNESS 1-5 • DENSITY lo/hi	Three filthy Uber tones in one. Blue recreates the fat and full tone of the Rev Blue. MkII is based on the tighter voicing of the Ultra's Uber mode. Ultra is exactly what it says, and likes high Deep settings.
B19	WZ-MC	Wizard Modern Classic 	• INPUT lo/hi • BOOST off/on • CONTOUR lo/hi	Lead channel of this Jubilee-inspired Canadian classic. Rig1 is a good starting place. Rig2 engages in the GEQ for a Hetfield / Garage Inc vibe.
B20	WZ-MT	Wizard MTL 	• SHIFT off/on • BOOST off/on • SATURATION 1-5	The lead channel from this boutique quake-inducer. Kick in the GEQ for some extra sculpting and fun.
B21	50/50	'90s Peavey 5150 II 	• BRIGHT off/on • CH. Green/Red	Cheap and cheerful it may be - but the 5150 is a legend for a reason. Green and Red channels included, but no clean. That would be madness.
B22	Erect	'90s Mesa Dual Rectifier 	• Model Rev C/G • Vintage/Modern	The red channel of two classic Rectifier versions in the one place, and the G in particularly loves the Zen Boost. We've voiced all modes to replicate the originals with the Deep at noon, but try around 10:00 for tighter tones.
B23	V3/4	Diezel VH4 	• Channel 3/4	Channels 3 and 4 from this German powerhouse. If you're looking for Tool tones though, check out the Artist Amps. Thick amp, so go easy on the Deep, and generous on Treb and/or Pres.
B24	Herman	Diezel Herbert MkIII 	• Channel 2/3 • MID CUT 1-3	Channels 2 and 3 of the mighty Herbert complete with three-position Mid Cut.

ARTIST AMPS

NOTES

Getting exact album tone is a deep rabbit hole, but (for recording duties) the right axe, **factory-paired IR** and suggested settings will get you close. Should you feel the need to chase down that last 5% you'll likely need additional processing and many hours of tiny, mind-numbing adjustments. Up to you of course, but these amps are for fun and driving inspiration - not to create more work!

For live playing / blasting through a cab, these settings can be pretty bright. **Lowering the Treble** and/or **Pres** a few clicks is recommended. The **Deep** may also be a bit much if using a beefy cab.

Ch / #	Amp Name	Based on	Options	Notes
B25	Ed	Eddie's 1968 Plexi 	• 1978 / 1984	Bright and crunchy VH1 tones and warmer 1984 tones both available, and at sane volumes.
B26	Core	Demeter TGP3  & Vox AC30 	• TGP / AC30	Dean from Stone Temple Pilots has always had great tone - so here's our homage to his filthy <i>and</i> chimey tones. TGP mode is somewhat based on his trusty Demeter, and is perfect for big, dirty riffage. The AC30 mode isn't authentic circuit-wise (EL34's and a TMB tonestack for starters). Tonally though it's in the right ballpark, particularly when paired with a nice open-backed cab, or our Celestion Blue IR.
B27	Superknown	Tonegarden 	• Superunknown/ Badmotorfinger	Our take on (some of) the tones from these two superb Soundgarden albums. The first is a Recto / Marshall hybrid of sorts, and the latter loosely based on a Peavey VTM-120. Head down, tweak some knobs and never be outshined again.
B28	Jake	JEL-modded JMP 	• Plexi / JEL-800	Fun to play 80's modded Marshall tones that retain the snarl, plus a handy plexi mode.
B29	Jerry	Alison Chains 	• Facelift / Dirt	What happens when the Zen team blends a Fish, a Snorkler and a Rectum Fryer? One disgusting milkshake, and two great amps to choose from. As you may have heard in our sound clips, these settings will get you pretty close to the album tones when double-tracked with a nice axe. For live use you'll need to experiment with the high and low end to suit your cab and ears. Time to rattle them bones.
B30	Jonesy	Tool Time 	• Lateralus / 10,000 Days / Fear Inoculum	Adam Jones of Tool always sounds great - so we dug deep and blended the DNA of a VH4 and JMP and some others. Available in three schismic flavors. Again, this setup records great but is usually bright in the room. If so, try bringing Pres back to noon but leaving the treble up.

ZEN CUSTOMS

NOTES
The Zen customs were created in collaboration with Aussie guitar legend and gearhead Leon Todd. They are voiced out of the box to cover classic rock to metal and are a lot of fun to play.
If you can't quite find the tone you're after in the 45 amps we've provided, reach out and we can customise one of these three amps to your taste remotely! Email for details.

Ch / #	Amp Name	Based on	Options	Notes
B31	Zen 1	Zen Hotrod Plexi 	• BRIGHT 1/off/2	Our special recipe modded-Plexi. Classic to 90s rock done with style.
B32	Zen 2	Zen High Gain 	• BRIGHT off/on	Searing British high gain tones for those that dream about a Wizard/Splawn hybrid.
B33	Zen 3	Zen Metal Machine 	• TIGHT off/on	Unapolegetic filth in the Über meets 5150 domain. The GEQ takes it to another level, so go crazy.
